

GUIDES (before the step)

STEP → GATE

SENSORS (after the step)

every step: skill-reader returns the binding checklist; dispatcher names roster + gates; the walkthrough protocol RUN → PRESENT → GATE → LITERATURE → DISTILL

every step: hooks (dispatch plan <24 h; raw-data guard; no-ship sha check on delivery); the disk state board; identity stamps

LiteratureHarvest.md (traps T1–T11); ADS four-form query; VizieR sweep; blind-first: harvest now, compare at step 9

0b literature harvest

harvest manifest validates against its schema; identity by trigger (T1 control)

literature agent A11: blind-first comparison at step 9

GCNIntelligence.md (G1–G2); identity by trigger, never by name

0 identity & circulars

zero-circular positive control; catalog QC tests

DataInventory.md (D1–D5); response coverage vs the source window

1 data inventory

figure-verifier (vision) + numbers-verifier vs the sample catalog

detector_selection.md, background_selection.md, source_selection.md, Binning.md; PI rulings quoted; ADOPT = present the human decision, never re-adjudicate

2–5 detectors, background, source, binning (ADOPT)

catalog validator (adjudication-aware); Stage-1 stamps validate; block table sha bound

SpectralFitting.md (L1–L33): menu, multistarts, chain gates, tie adoption, count coordinates, margins only, rails disclosed

6 spectral fitting

engine guards (validity, LRT, rails) · fit-table auditor (basis, rails, offset, count triple) · lessons-as-tests

tie-reporter; admission-gate; numbers-verifier on the PRESENT block

Temporal.md (TM1–TM5) + its defect ledger; estimator labels; lag convention

7 temporal

figure + numbers verifiers; seed-auditor (bit-identical replay); port-verifier on ported code

SEDPanels.md (to be written); today: FigureVisionQC S1–S6 (strict-XSPEC display contract) + SpectralResidualReview.md

8 νF_ν panels

no-ship hook: a PNG ships only with a sha-bound verdict

figure-verifier on EVERY panel; notes-reviewers A7 (dashed)

qc_flagging.md; ReportSpec R1–R5 (+R3a claim typing); reconciliation P0–P6

9 QC, report, literature diff, distill

numbers-verifier on the report; distiller → register; referee panel (milestones, PI-triggered)

report-conformance gate A10

continuous, outside the steps: eval battery (one command; tests + fit-table audits, result named with model id and commit) · **distillation** of every incident into a lesson + register row, same session *dashed: drift janitor (report-only), did-it-fire ledger, pre-commit gate*

grey: computational

white: inferential

human gate; approval identity-stamped

dashed:

PROPOSED
