

**actions** — solid: exists on disk today (a stamp or a receipt; identity on the stamps only); dashed: PROPOSED (intent → preflight → commit → receipt)

◆ = object type with a JSON schema on disk (dev/schemas, 2026-09-02). Colour: blue = written by code (the audit box's prose verdicts are agent-written); amber = carries an approver identity (human on 433 of 436 selection rows); white = law and documents. Links: solid = a declared field carries it; dashed = by naming convention only. Two product roots are resolved by an index file, not by the objects (not one reality yet).
