

GUIDES (before the step)

STEP → GATE

SENSORS (after the step)

every step: skill-reader returns the binding checklist; dispatcher names roster + gates; the walkthrough protocol RUN → PRESENT → GATE → LITERATURE → DISTILL

every step: hooks (dispatch plan <24 h; raw-data guard; no-ship sha check on delivery); the disk state board; identity stamps

LiteratureHarvest.md (traps T1–T11); ADS four-form query; VizieR sweep; blind-first: harvest now, compare at step 9

GCNIntelligence.md (G1–G2); identity by trigger, never by name; zero-circular case recorded as a result (QC checklist)

DataInventory.md (D1–D5); response coverage vs the source window

detector_selection.md, background_selection.md, source_selection.md, Binning.md; PI rulings quoted; ADOPT = present the human decision, never re-adjudicate

SpectralFitting.md (L1–L34): menu, multistarts, chain gates, tie adoption, count coordinates, margins only, rails disclosed

Temporal.md (TM1–TM5) + its defect ledger; estimator labels; lag convention

SpectralFitting.md L10/L11; FigureVisionQC S1–S6 (strict-XSPEC display contract); SpectralResidualReview.md

SEDPanels.md (to be written; marked in the ledger)

qc_flagging.md; ReportSpec R1–R5 (+R3a claim typing); reconciliation P0–P6

0b literature harvest

0 identity & circulars

1 data inventory

2–5 detectors, background, source, binning (ADOPT)

6 spectral fitting

7 temporal

8 νF_ν panels

9 QC, report, literature diff, distill

PI harvest manifest validates against its schema (bibcode-keyed; four list keys tolerated)

PI no sensor beyond the PI gate at this step (roster: “no figures, no verifier”)

PI figure-verifier (vision) + numbers-verifier vs the sample catalog

PI catalog validator (adjudication-aware); Stage-1 stamps validate; block table present (state board)

PI engine guards (validity, LRT, rails) · fit-table auditor (basis, rails, offset, count triple) · lessons-as-tests

PI tie-reporter; admission-gate; numbers-verifier on the PRESENT block

PI figure + numbers verifiers; seed-auditor (bit-identical replay); port-verifier on ported code

PI no-ship hook: a PNG ships only with a sha-bound verdict

PI figure-verifier on EVERY panel; notes-reviewers A7 (protocol, no file)

PI numbers-verifier on the report; literature agent A11 (blind-first diff; protocol, no file); distiller → register; referee panel (milestones, PI-triggered)

report-conformance gate A10

continuous: eval battery, one command (tests + fit-table audits), result named with model id and commit

continuous: distillation of every incident into a lesson + register row, same session (distiller)

continuous, PROPOSED: drift janitor (report-only); pre-commit fast-suite gate
